

DESCRIPTION

XT704 – XT704G

Prefabricated kit PCS "Pettinaroli Commissioning Solutions" with 70 mm flushing by-pass, **ΔY** **ΔY** **92** (linear and dirt resistant PICV), **Filterball**® shut off valve with integrated strainer, drain valve with hose connection, air vent and additional test point.

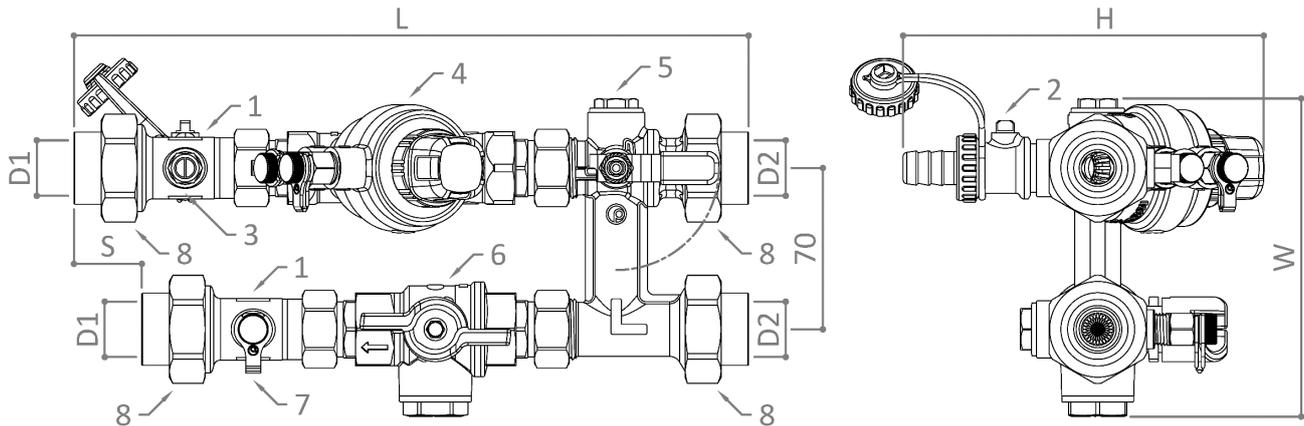

The PCS kit is ready to be install and provides all components required for commissioning and operation of the fan-coil units. By-pass avoids reverse flushing across the PICV.

Each kit is 100% factory tested against leakage. The **PICV** is fully maintainable and has got two test points for commissioning and system optimization.

The **Filterball**® is a ball valve with an integrated strainer in the sphere. Main features: blowout proof stem, triple sealing technology, adjustable packing gland and lower pressure drop compared to a normal Y strainer. Stainless steel filter FM28: very easy to inspect and maintain.

Soft thermal insulation case available, if included the product part number becomes **XT704G**. More informations in the **INSULATION** chapter.

DATA

Features	
Pressure rating	PN25
Flow rate range	19÷3300 l/h; depending on PICV selected
Working temperature range*	-10÷100°C
Working differential pressure range	25÷600 kPa; minimum depends on PICV and setting
Flow control accuracy (linearity and hysteresis)	Pos.9 ±5% for ΔP < 1 bar. Others ±10% for ΔP > 1 bar at 100%
Control valve characteristic	Linear
Control valve leakage rate to IEC 60534-4	Class IV
Thread types	BSP (available also NPT)
Medium**	Water or water+glycol 30%

*No frost and no steam. Under 0 °C glycol must be added. For temperature limits of the actuators and flexible hoses see their dedicated technical specifications.

**Water quality must comply requirements mentioned in PICV technical specifications.

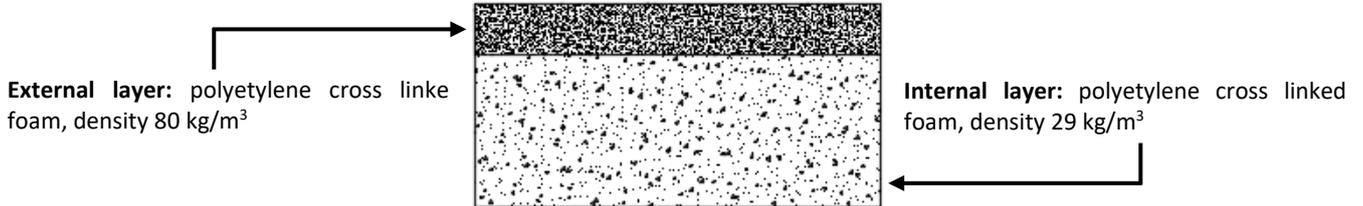

SCHEMATIC

INSULATION

Class 1 fire rated insulating case made by **2 shells** connected with **Velcro®** (multiple opening-closing) and realised with a sandwich structure:

- **External layer** made by high density insulating material to give it rigidity;
- **Internal layer** made by low density insulating material with high insulation performances.

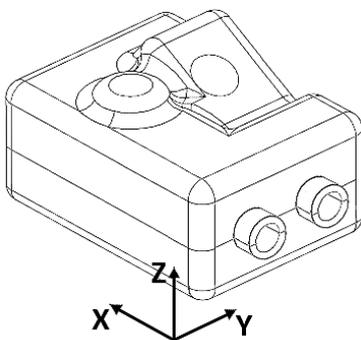

Total thickness 20 mm.

For the properties of the insulating materials see the following table:

	Standard	Insulation material		Unit of measure
Density	ISO 845	29	80	Kg/m ³
Compression stress (50% deflection)	ISO 3386/1	88	260	kPa
Tensile strength longitudinal	ISO 1798	0.18	0.80	MPa
Extension longitudinal stretch	ISO 1798	120 (break)	170 (break)	%
Residual distortion 22h at 23°C Deflection of 25% 24h after release	ISO 1856	13	1.5	%
Operating temperature range	-	-60/+90	-60/+90	°C
Thermal conductivity (40°C)	EN 12667	0.040	0.049	W/mK
Fire resistance	UL94	HF1	HF2	-

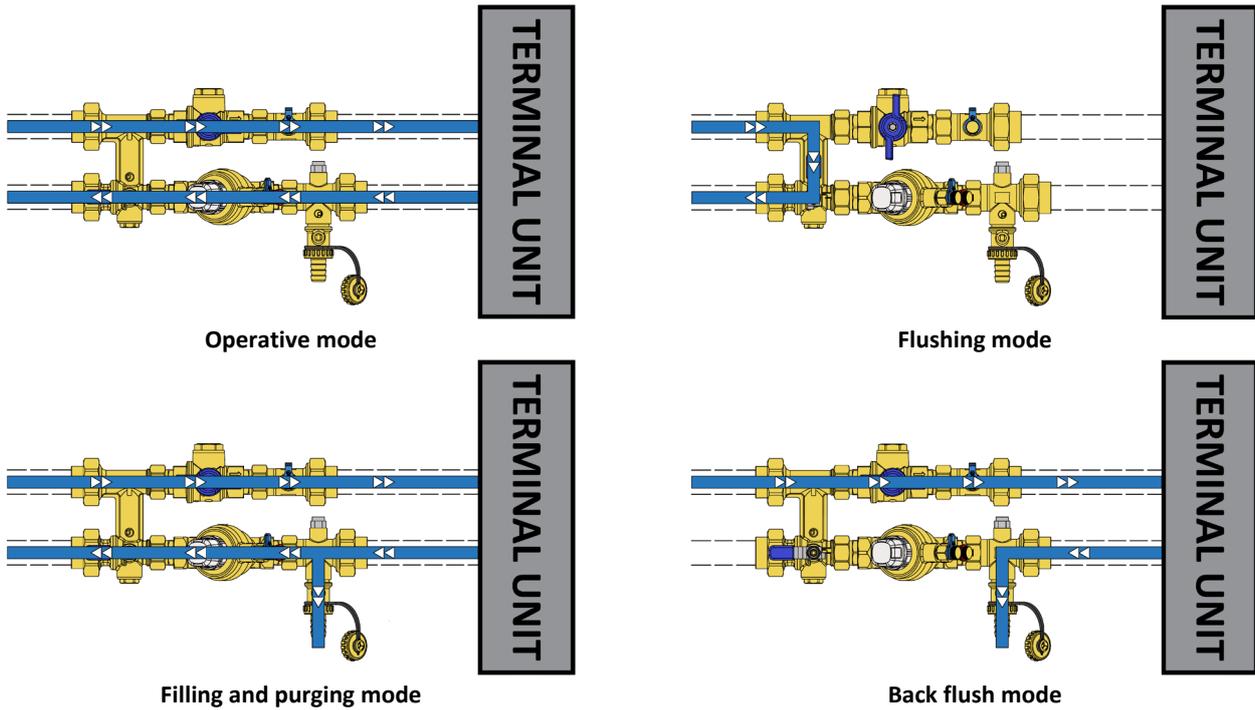

If insulation is included, the product part number becomes **XT704G**. Insulating cases dimensions are shown below:

Kit	X [mm]	Y [mm]	Z [mm]
XT704G – ½" – 150 l/h	355	170	160
XT704G – ½" – 450 l/h	355	170	160
XT704G – ½" – 850 l/h	340	180	170
XT704G – ¾" – 1000 l/h	340	180	170
XT704G – ¾" – 1850 l/h	340	180	170
XT704G – ¾" x 1" – 2500 l/h	410	180	160
XT704G – ¾" x 1" – 3300 l/h	410	180	160

 Picture shown is for illustration purposes only. The real shape of the insulating case will vary depending on the type of kit.

OPERATIONS

*Type of actuator: EM=ElectroMechanical or TE=TermoElectric. **Equipped with stroke detection system.

For kits up to 1850 l/h use actuators series A54, VM0 and adapter OA7010 (for VA748 series). For kits from 2500 l/h and above use actuators series A56, VM0 and adapter OA748X (for VA748 series).

VA748 series

A54 & A56 series

VM0 series

 Where not indicated, the adapter is not included with the actuator. For further informations about the actuators please refer to their dedicated technical specifications.

INSTALLATION

The PICV can be installed in any position between vertical and horizontal: for electrical safety reasons, in case an actuator is mounted onto the valve, upside down installation of the PICV must be avoided (Fig. 1). Furthermore, due to the presence of the **Filterball®** which has an integrated strainer, it is necessary to pay attention to the direction of installation of this latter so that the flow won't pass trough it from bottom to top (Fig. 2).
